

# Serious About Sustainability

## Our Performance 2024

**61.38 tonnes  
CO<sub>2</sub>e offset**

We offset 61.38 tonnes of carbon and are certified as Carbon Neutral through our partnership with Carbon Neutral Britain.

**2.25 tonnes  
landfill**

We also achieved our lowest contribution to landfill waste at just 2.25 tonnes – the rest was recycled.

At Acopia, we believe in doing more with less. That's less waste, less cost, and less impact on our planet – but also more care, more efficiency and more positive change.

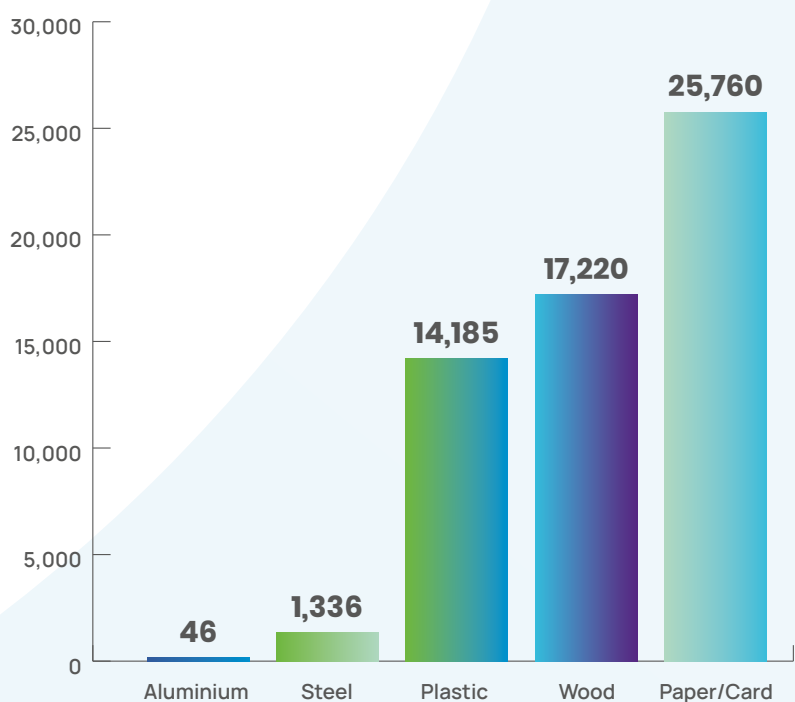

Sustainability to us isn't just about reducing footprints. It's about creating lasting value for the businesses we work with, communities, and the environment.

By helping our clients work smarter and make the most of every resource, we're building a future where good business and doing good go hand in hand.

**58,547 kg  
waste recycled**

### Recycled Waste kg

## Energy through recycled waste

Certain waste can be diverted from landfill and be re-purposed into energy. Wherever possible, we choose this option – helping to turn waste into energy to power local homes.

## Energy through greener technology

We generated 17,438 kWh from our solar panels

That's enough power to make 348,760 cups of tea

or charge our fleet of electric vehicles to travel 69,752 miles!

## Best Practice

We have moved away completely from paper packaging to recycled plastic void fill for customer deliveries saving

**3.7million kg of CO<sub>2</sub>**

All of our warehouse packaging is 100% recyclable and we also find a lot of our customers reuse our boxes for internal transfer of goods!

We use our own iWrap High Performance pallet wrap which means we can use the minimum amount of plastic on every pallet we despatch which results in reduced waste for us – and our customers.

We make it possible for our customers to further reduce their carbon footprint by offsetting their pallet wrap.

## Standards and Accreditations

We work hard to reduce the environmental impact for the brands we work with. But what are we doing to mitigate our own?

- We are certified Carbon Neutral for Scope 1 & 2 through Carbon Neutral Britain and in partnership with The Woodland Fund to offset our carbon emissions which we continue to monitor closely.
- 2024 also saw our preliminary work to calculate our Scope 3 liabilities for the future.
- We hold ISO 9001, 14001 and 27001 standards and Ecovadis accreditation for 2024.
- We work closely with SEDEX who enables us to independently audit all of our partners for sustainability, ethical practices, fair pay, working conditions and Health and Safety.
